Introduction

Welcome to Mimi Mart! We're not just a convenience store; we're your one-stop destination for all your daily needs. With a commitment to providing unparalleled service and a wide range of high-quality products, we cater to the diverse needs of our valued customers. From fresh produce to pantry staples, from toiletries to household items, our shelves are stocked with carefully curated goods sourced from trusted suppliers. We see how many marts in Cambodia are using point of sale to record the numbers of products that have been sold per day or a record of the numbers of customers that buy their products each day, and our project is based on that kind of concept.

Our Functionalities

- 1. LOGIN FUNCTION**
- 2. DASHBOARD**
- 3. POINT OF SALE**
- 4. ORDERS**
- 5. CUSTOMER**

02 Log In Function

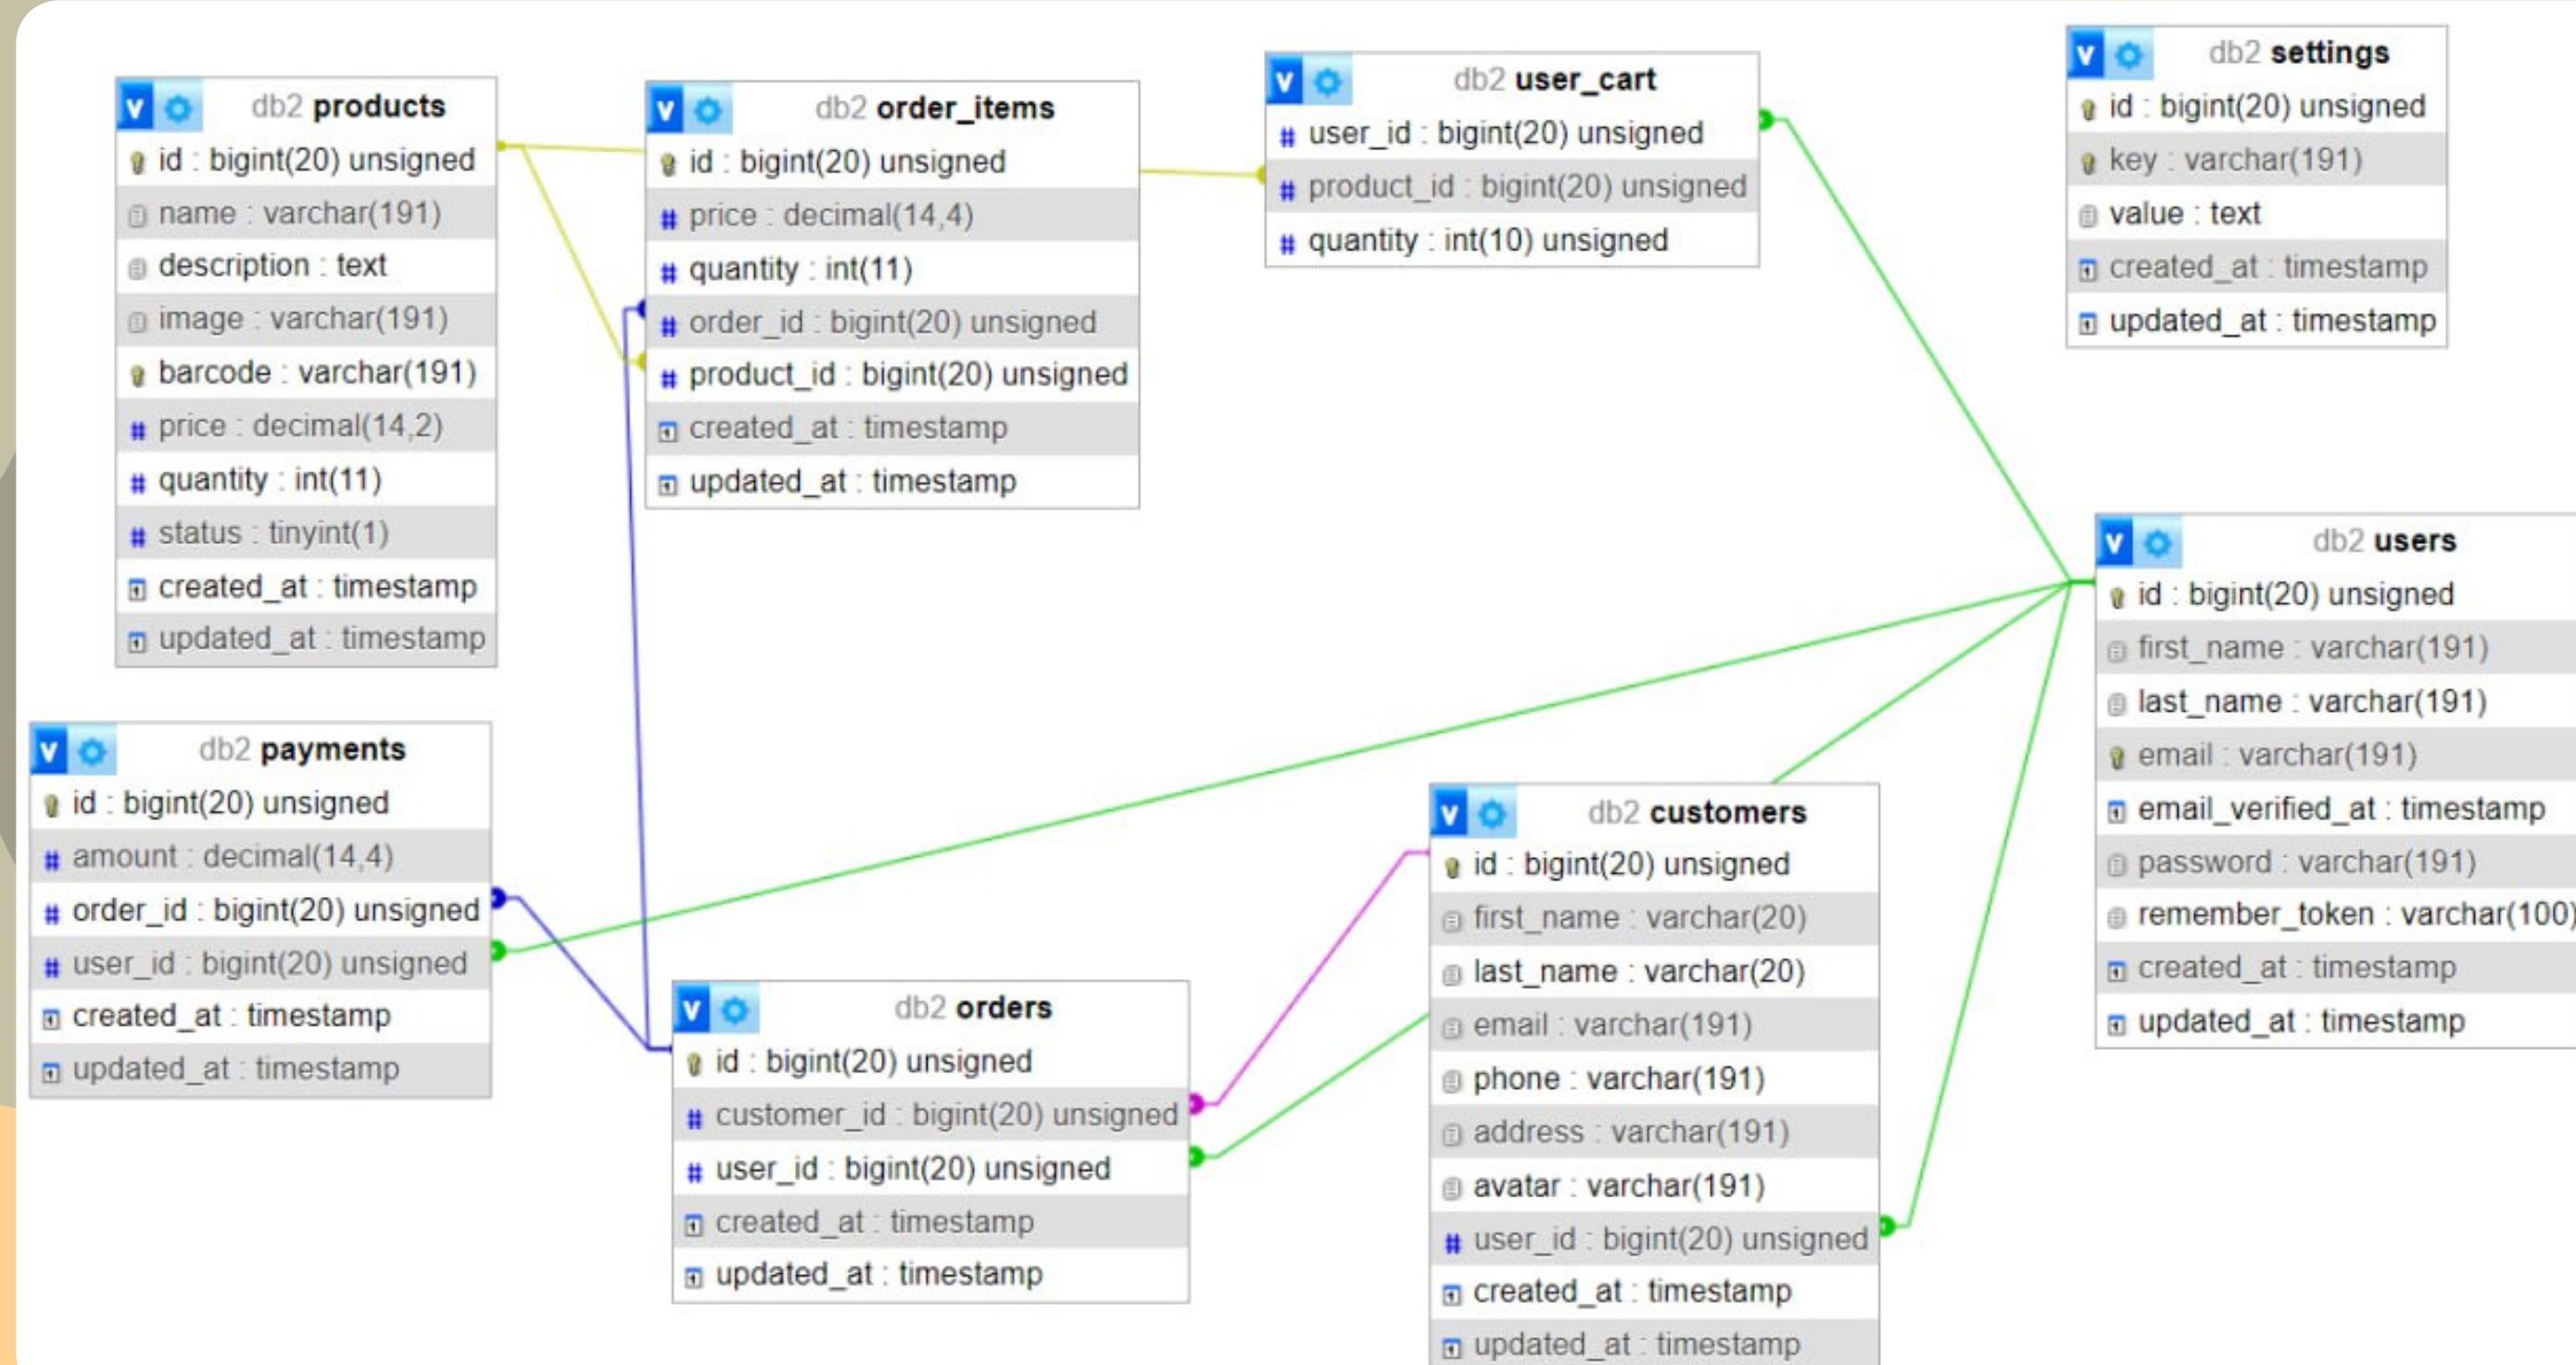

03 Home Page

The screenshot shows the Laravel-POS application's home page. On the left is a dark sidebar with the title "Laravel-POS" and a user profile icon for "Admin admin". The sidebar contains navigation links: Dashboard, Products, Point Of Sale, Orders, Customers, Settings, and Logout. The main area is titled "Dashboard" and features four colored cards with summary data:

- Orders Count:** 2 (blue card) - Shows a shopping bag icon and a "More info" button.
- Income:** \$ 30.00 (green card) - Shows a bar chart icon and a "More info" button.
- Income Today:** \$ 0.00 (red card) - Shows a pie chart icon and a "More info" button.
- Customers Count:** 1 (yellow card) - Shows a user icon with a plus sign and a "More info" button.
